CAUTION

**Hazardous Waste is in
YOUR HOME**

**What it is and
how to get rid
of it without
harming your
family or
environment.**

**Easy, No Cost
Solutions**

Think Pollution Prevention!

The best way to deal with household hazardous waste is to not generate it in the first place!

This is achieved by purchasing alternative non-toxic products, less-toxic products, and no more than you can use.

and...

Using the entire product before purchasing more.

Common Hazardous Household Products:

How many have you just thrown away?!

- Vehicle Oil
- Paints and Stains
- Aerosols
- Laundry Products
- Batteries
- Yard and Garden Products
- Thermostats
- Cleaners
- Compact Fluorescent Light Bulbs
- Electronics
- Pharmaceuticals

What do I do when I'm ready to throw them away?

Contact your city or county offices and they will have the free hazardous household waste collection sites for your area!

Clean water is everyone's responsibility

Household Hazardous Waste is disposed of improperly when it is poured down the drain, onto the ground, into the storm sewers, or put in the trash. Some household hazardous waste can injure sanitation workers, contaminate wastewater treatment systems, or leak out of landfills into ground water.

 **CAUTION**

1.6 million tons of household hazardous waste each year.

Americans generate

Doesn't the landfill just take care of that kind of stuff?

NO!

When you put these items in your trash can, they go to the landfill where they get dumped on to the ground with the rest of the trash!

These items contain extremely harmful chemicals that get released on to the ground and in to our groundwater!

You don't want to drink that!
